The graph shows sunglasses sales throughout the year 2022 of Ray-Ban Company.

➤ Exercise

Write a summary of between 30-50 words of the following paragraph using the suggested steps in writing summaries.

Democratizing IT

Data democratization refers to the process of making digital information available and accessible to everyone within an organization, regardless of their technical know-how. It means empowering employees to work with data, understand data and make faster data-informed decisions. According to Marr (2021), when staff members are given access to the organization's data, operations become more streamlined and efficient as those who know the business will not have to wait for data scientists to analyze the data for them. However, organizations who democratize data need to have a strong leadership in place to ensure the data is properly managed.
