

Lecture 7 Description, Analysis & Evaluation

Exercise 1

Read the following sentences and identify whether they are description [D], analysis [A] or evaluation [E].

1. One suggestion proposed in this paper is that the only way to control AI is to ensure that its values are our values. []
2. Bioengineering is the application of engineering knowledge to the fields of medicine and biology for the enhancement of human health. []
3. The main issue with carbon capture and storage under the ocean is that CO₂ reacts with water and causes the oceans to become too acidic for marine life. []

Exercise 2

In this paragraph highlight the following sections: description, analysis, evaluation.

Smart home technology

Smart home technology can take many forms, from controlling the lighting and temperature of a room to monitoring the contents of a fridge. As most current smart homes rely on retro-fitting, which is the process of adding home automation features to an existing property and can lead to considerable costs for the homeowner, newer homes are being built with the additional sensors and systems already installed. However, as the amount of smart home devices and applications continues to grow rapidly, it has given rise to compatibility and connectivity issues. As a result, the focus should now shift to standardising the technology's protocols.

Exercise 3

Look at the bar chart and answer the questions.

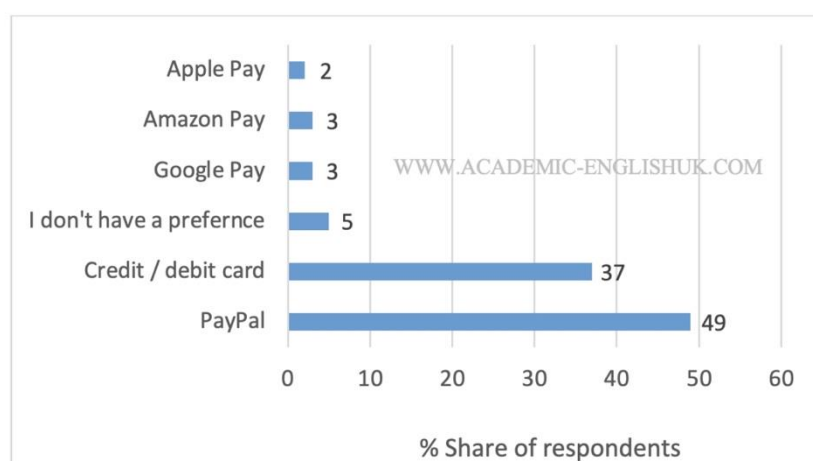

Fig. 1. Online payment methods in the UK in 2019 (adapted from Statistica, 2021).

Description

i.	What does the graph show?
ii.	Which country is the chart referring to?
iii.	Which year was the data collected?

Analysis

<u>i.</u>	Which findings are the most significant?
<u>ii.</u>	How do the findings compare?
<u>iii.</u>	What is the reason for the trends?

Evaluation

<u>i.</u>	Will the findings change in the future?
<u>ii.</u>	How will the findings change in the future?
<u>iii.</u>	What's your rationale for the changes you mentioned?
